Sapido RB-1802

It's nice to have wireless internet in the house and get rid of the hassle of wiring. But, most people have concerns over poor wireless signal and connection quality. SAPIDO understands your needs and has come out the Advanced Wireless N Router. Complies with the latest 802.11n high speed wireless standard and built with 19cm super long high gain antenna as well as high performance chipset, SAPIDO WiFi Router ideally gives a best solution for the use in big houses, between floors and compartments.

You may ask: Can I extend wireless signal for the use in other rooms or another floor like wire-internet? The answer is YES. You can use the WiFi AP feature of SAPIDO WiFi Router to bridge and extend wireless signal from your existing router to enhance weak wireless signal and reduce dead spot of wireless internet in the house. Also, SAPIDO WiFi Router supports not only ADSL, Cable and Fiber, but also Public WiFi or so called Hotspot. If you live in a campus, you can put SAPIDO WiFi Router by the window to re-boost wireless internet from outdoor to indoor and share wireless internet in your room.

In addition, SAPIDO WiFi Router complies with the latest 802.3az Energy Efficient Ethernet standard and carrying Green AP technology. It adjusts power consumption according to the auto detect of Internet connection and packet transmission, and can save up to 80% electricity. In addition, the smart QoS provides stable data transmission. You may assign different priority to different applications or data flows for the smoothness on streaming multimedia applications such as online games, Voice over IP, and IP TV. Powerful firewall feature would safeguard your network by preventing the attack from hacker or virus, and blocking inappropriate sites.

DDNS, NAT, VPN, Virtual Server, DMZ…, more features are waiting for your exploring!
